Description(Top/Haut de page)

Tftpd32 is a free, opensource IPv6 ready application which includes DHCP, TFTP, DNS, SNTP and Syslog servers as well as a TFTP client.
The TFTP client and server are fully compatible with TFTP option support (tsize, blocksize and timeout), which allow the maximum performance when transferring the data.
Some extended features such as directory facility, security tuning, interface filtering; progress bars and early acknowledgments enhance usefulness and throughput of the TFTP protocol for both client and server.
The included DHCP server provides unlimited automatic or static IP address assignment.

Tftpd32 is also provided as a Windows service.

Tftpd64 is the same application compiled as a 64 bits application.

Tftpd32 est une application opensource qui embarque des serveurs TFTP, DHCP, DNS, SNTP et Syslog (ouf !), ainsi qu'un client TFTP. La partie TFTP est compatible avec les négotiations du protocole TFTP pour obtenir de meilleures performances. De plus; des apports ont été inclus pour augmenter le confort d'utilisation et les performances du protocole. Quant au serveur DHCP, il permet d'affecter des adresses IP soit de manière statique, soit automatiquement.
